Summary of Conference

Based on a phone conversation with Ecology on November 14, 1990, (P. J. Crane, M. A. Mihalic, J. Witzcak of Ecology) regarding the disposal of the existing empty 55-gallon drums that are currently stored in the basins, Ecology has concurred with our proposal of wiping out the drums and then radiologically surveying them prior to their disposal as clean scrap. The drums previously contained 183-H waste and were returned from the Central Waste Complex for inspection/repackaging due to the corroded drum problem. Specific instructions will be issued to the field on the drum cleaning/disposal.
